

Gurugram Interim Orders — Dataset Briefing

SFIO vs Adarsh Buildestate Ltd & 186 others | CNR HRGR010070222019 | COMA/5/2019

District & Sessions Court, Gurugram — Court 26 (ASJ) | orders dated 18 May 2019 to 8 September 2026

120 hearing dates	149 unique orders	78 contested orders	434 portal entries
-----------------------------	-----------------------------	-------------------------------	------------------------------

Every figure below is derived from the collected documents and is reproducible from the accompanying CSV. Nothing is estimated.

A. Hearing dates — how many times the court sat

The index records **120** distinct hearing dates between 18 May 2019 and 8 September 2026. Documents exist for **119** of them.

The gap is **2025-07-22**. That date is represented by a single portal entry (164), and no PDF for it exists in any source supplied. So the court sat on 120 recorded occasions; we hold papers for 119.

B. Unique orders — how many orders were actually passed

149 unique orders. The grouping produces 150 order-records; one of them (22 May 2023) is the same approver order published twice, the second copy having its pages repeated inside the PDF. It is byte-different but word-for-word identical, so it was caught by text comparison rather than by checksum.

Caveat on the true figure. Entries 141 and 164 have no document anywhere. Entry 141 falls on 30 May 2023, where three sibling entries are already collected, so it may simply duplicate an order we hold. Entry 164 is the sole entry on its date and is therefore almost certainly a further order we do not hold. The honest range is **149 to 151, with 149 confirmed**.

C. Contested orders

78 of the 149 unique orders record an actual contention — an argument advanced by the defence, a reply by the prosecution, or reasoning given by the court.

The remaining **71** are composite roll-calls, remands and adjournments in which nothing was argued. These are marked as such in the index rather than padded with invented narrative. The workbook carries a dedicated *Contested orders* sheet holding only the 78.

D. Why 434 portal entries become 149 orders

The workbook's first sheet has 435 rows — one header plus **434 entries**. The court publishes one table row per defendant an order concerns, and sometimes splits a single order across several one-page PDFs. Three mechanisms account for the whole collapse.

Mechanism	What it means	Orders
AS-IS	the entry was already one whole order	118
DEDUPED	byte-identical copies collapsed to one	31
MERGED	single pages of one order joined back together	1

431 entries holding a document
-188 identical copies removed (across 31 orders)
- 93 split pages absorbed (across 1 order)
—
150 order-records
-1 content duplicate (22 May 2023)
—
149 unique orders

The three entries without a document — 50, 141 and 164 — bring the total back to 434.

Worked examples

Portal entries	Becomes	Mechanism
266 – 380	one order of 17 Apr 2026	115 byte-identical copies collapsed
172 – 265	one order of 18 Mar 2026	5 single pages merged into one 5-page order
382 – 427	one order of 4 Jun 2026	46 byte-identical copies collapsed

A per-order audit trail for all 150 records is in [reconciliation_434_to_149.csv](#).

Known gaps

Entry	Date	Status
50	18 Jan 2021	Never uploaded by the court. eCourts returns “File Is Not Uploaded”. Not retrievable by anyone.
141	30 May 2023	Absent from both archives and the resolver file. Three sibling entries on this date are held.
164	22 Jul 2025	Absent. Sole entry on its date, so this date has no document at all.

One further data caution: the portal's listing date is not always the date on the order. Entries filed under 18 September 2019 carry order text dated 11 July 2019. Grouping follows the portal date, because that is what the court's own index uses.

What is in the set

File	Contents
combined/	119 PDFs, one per hearing date, bookmarked; 692 pages in total
Gurugram_Order_Index_Combined.xlsx	Order index (all 434 entries) · Orders (the 150 records) · Contested orders (the 78)
orders_summary.csv	one row per order: scope, contentions, decision
reconciliation_434_to_149.csv	the audit trail behind the table above
orders/	the 250 source PDFs as downloaded

How these figures were checked

Every accused number, statutory section, case citation, date and money figure asserted in the index was grepped back against the text of the order it was attributed to. All 877 accused attributions resolve — 756 stated as a number, 121 by the person's name. Of 342 citations checked, one was wrong: a reference to section 212(6) of the Companies Act in the order of 15 September 2021 belonged to a similar order a week later. It has been corrected.

What this check does not establish. It verifies that every fact cited sits in the document it is attributed to. It cannot verify that an argument has been characterised fairly — that is editorial judgment. Before this informs advice or a filing, the 78 contested orders should be read against the PDFs by someone qualified. The other 71 assert nothing beyond “no contentions recorded”.
